The Building Block Series

LibAriadne: an SSH Tunnel Lib

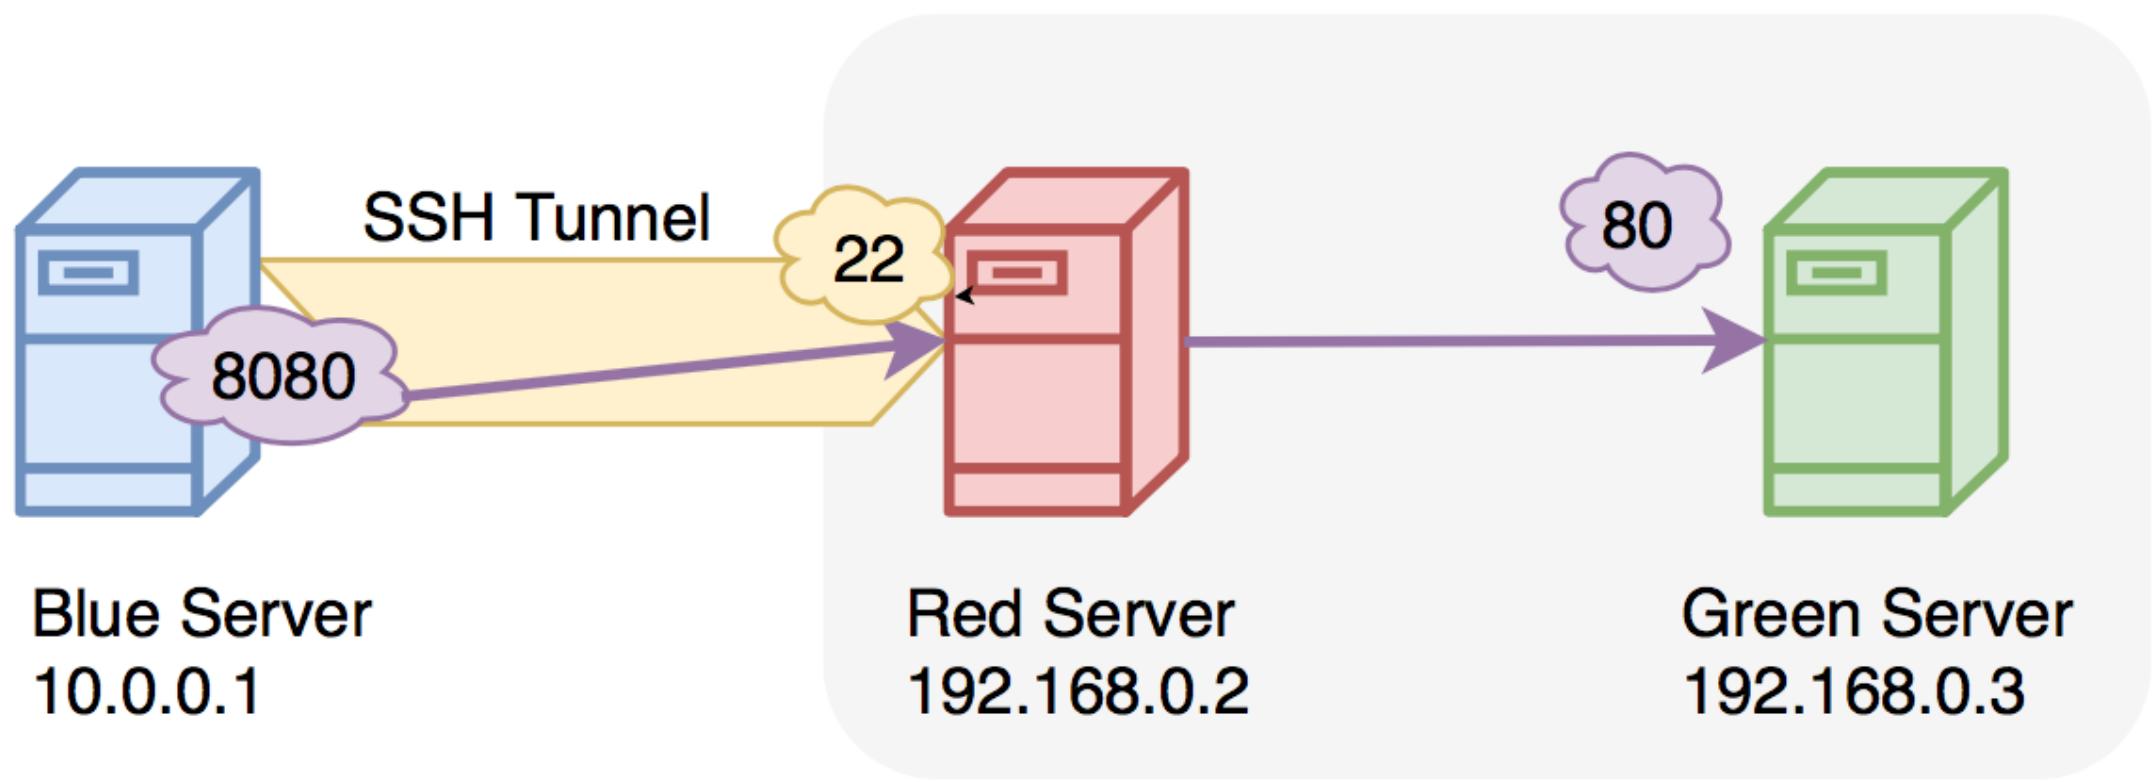

Tunnel Definition

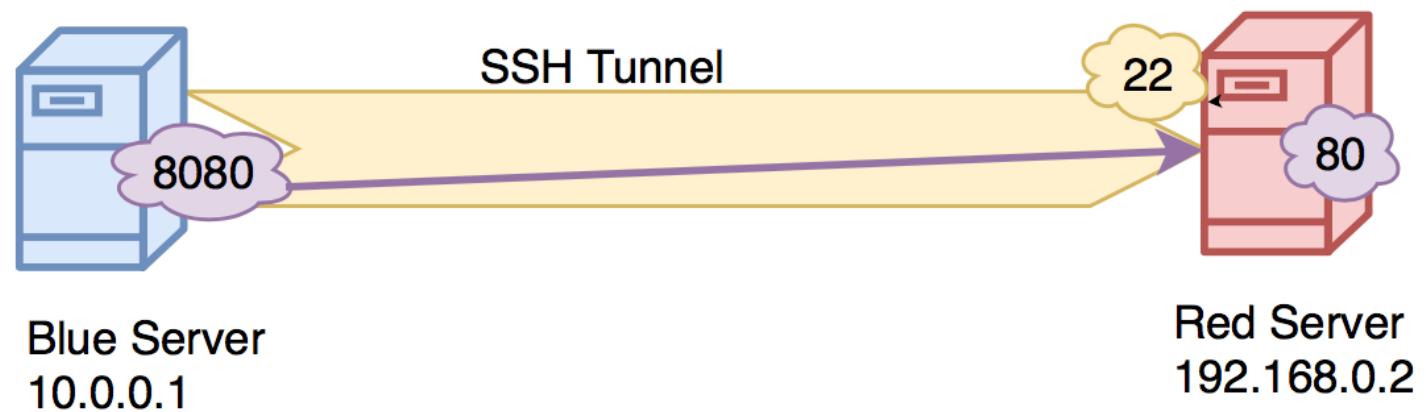

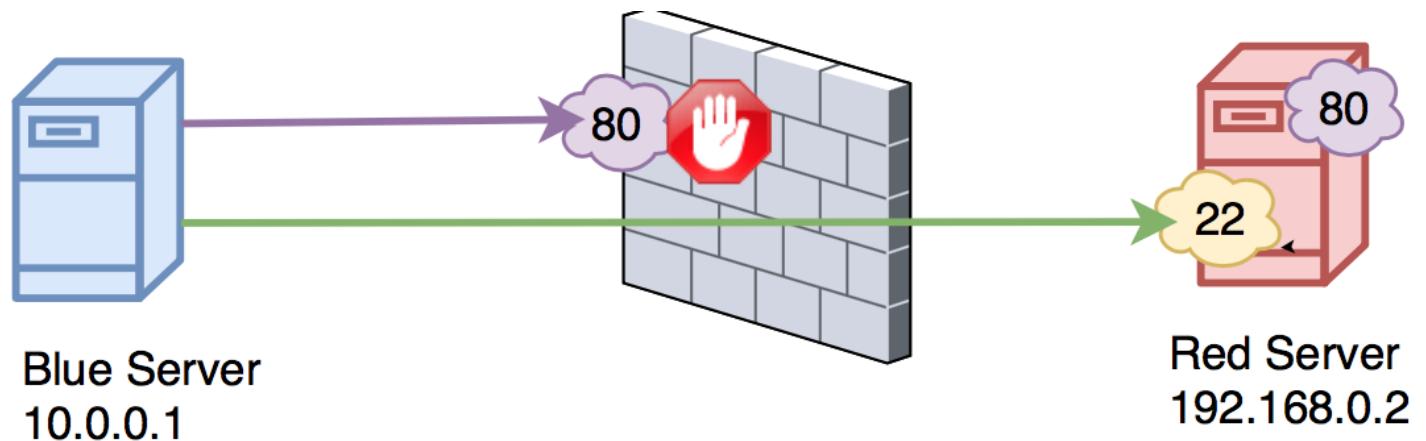

- a tunneling protocol is a **communications protocol** that allows for the movement of data from one network to another.
- involves allowing private network communications to be sent across a public network (such as the Internet) through a process called **encapsulation**.
- tunneling involves **repackaging** the traffic data into a different form, perhaps with encryption as standard, it can hide the nature of the traffic that is run through a tunnel.
- *SSH tunneling is a method of transporting arbitrary networking data over an encrypted SSH connection.*

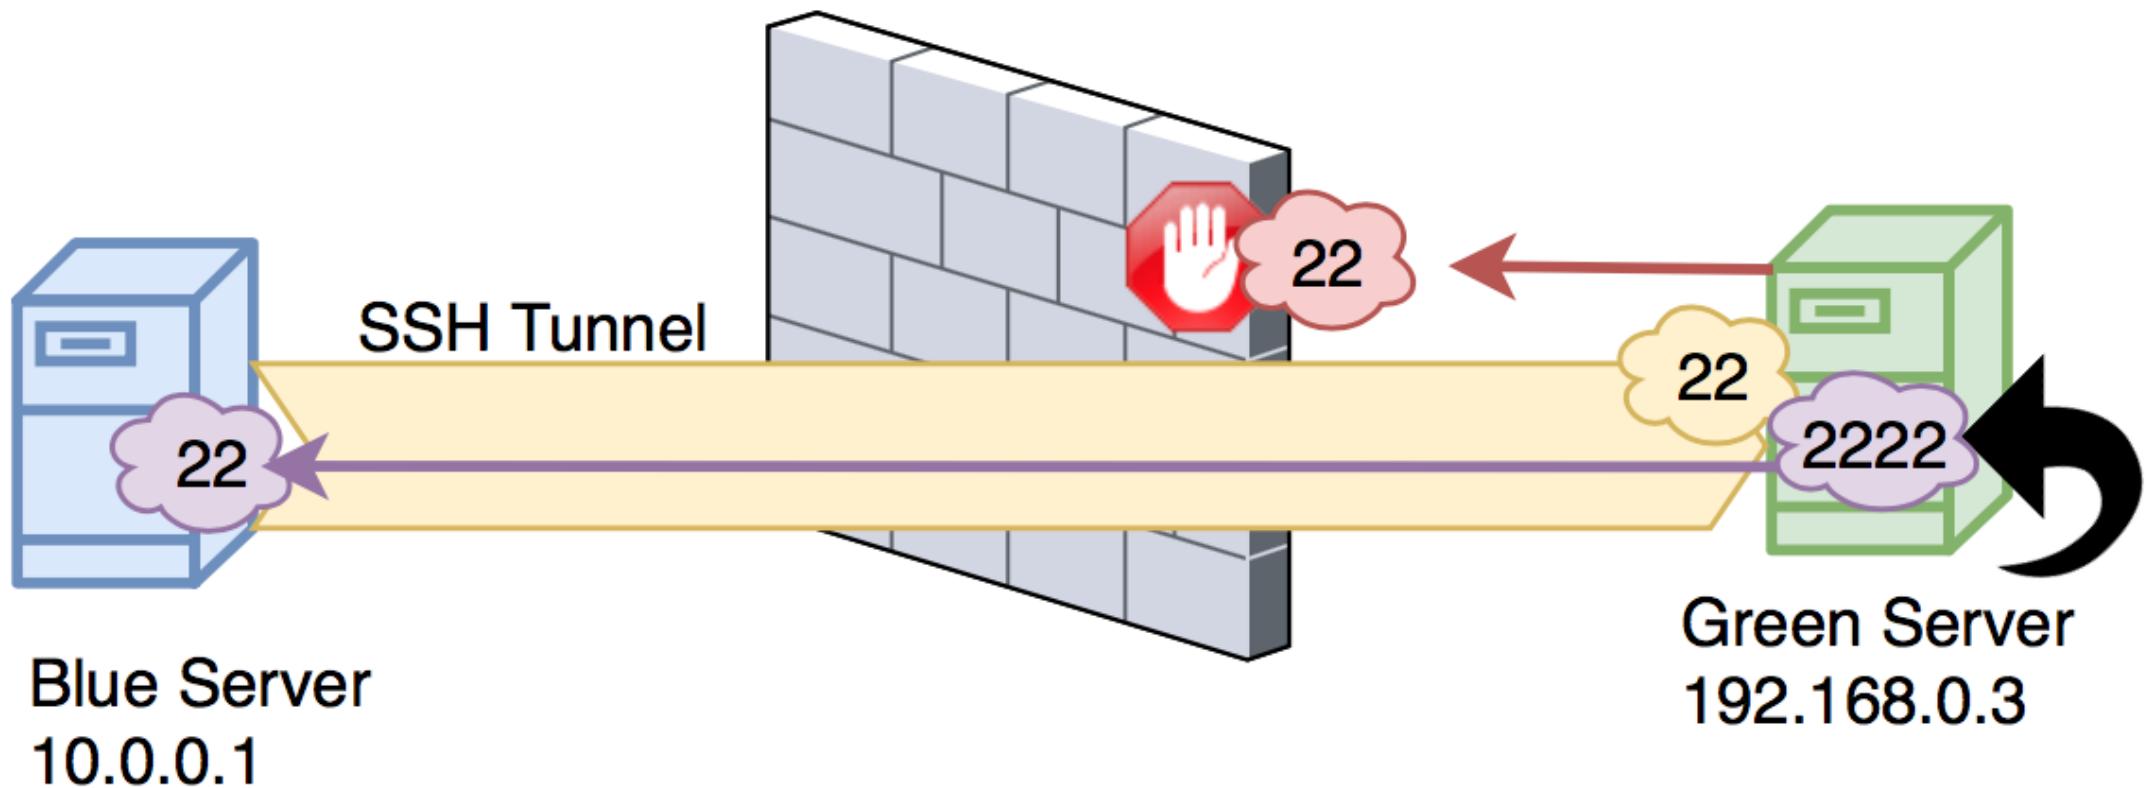

Proxy To Remote Server

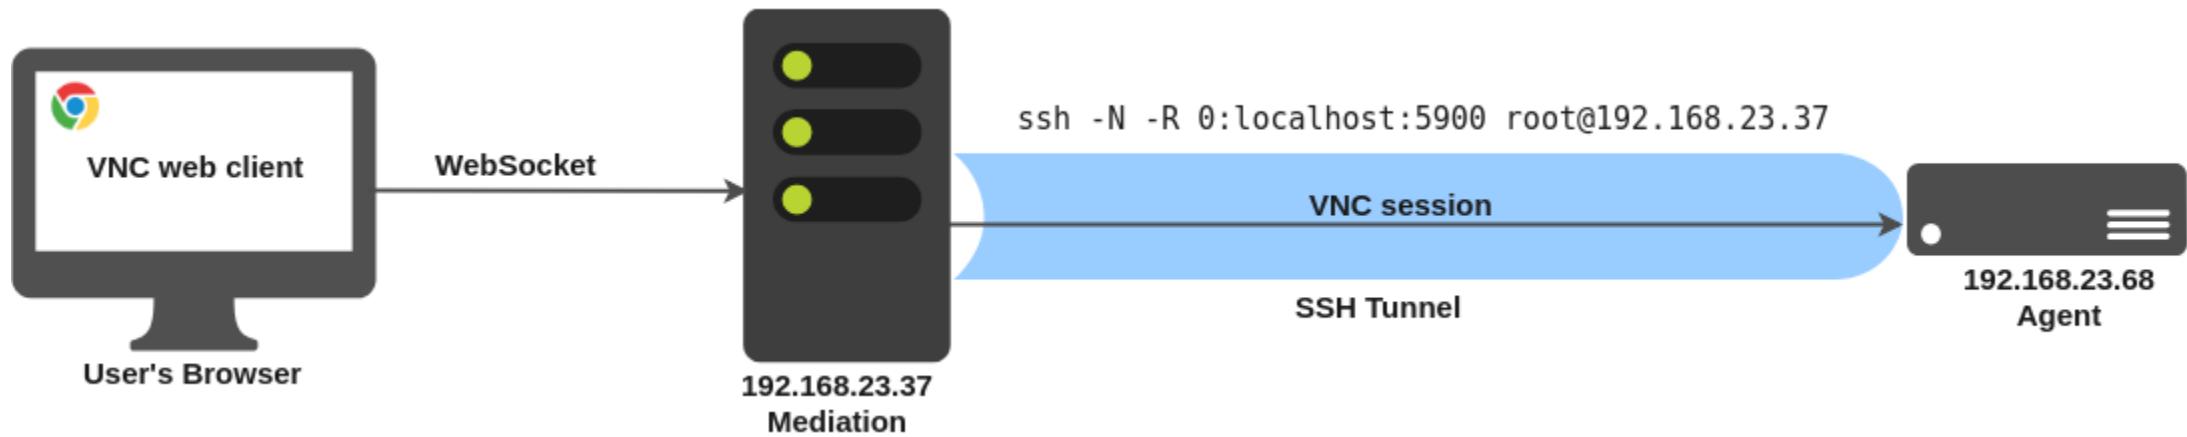

Port Forwarding

Remote Port Forwarding

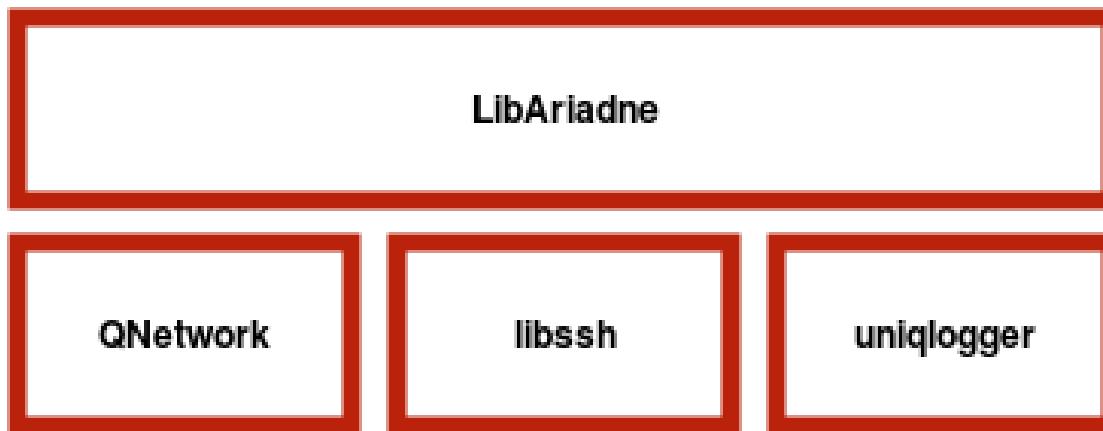

Atena Desktop Display

- Agent starts the ssh remote tunnel to mediation
- Agent starts a vnc server
- Mediation, using the ssh tunnel start is able to create a vnc connection to the agent

Libariadne stack

- Qt 4.8 or Qt 5.x
- Libssh 0.8.5
- Uniqlogger 0.6.1

1. Create lib config

```
ariadne::Config config;  
  
// configure ssh server data  
  
config.sshHost      = m_info.m_sshHost;  
  
config.sshPort      = m_info.m_sshPort;  
  
config.sshUsername  = m_username;  
  
config.sshPassword  = m_password;  
  
// configure ssh local and remote ip:port  
  
// CUT...  
  
// configure lib logging  
  
config.logConfig    = m_logDescriptor->createWriterConfig();  
  
// CUT
```

2. Create tunnel

```
m_tunnel = new ariadne::Tunnel(config);

connect( m_tunnel, SIGNAL(started()) ,
          this, SLOT(sshStarted()) ) ;

connect( m_tunnel, SIGNAL(stopped()) ,
          this, SLOT(sshStopped()) ) ;

connect( m_tunnel, SIGNAL(error(ariadne::Error)) ,
          this, SLOT(sshError(ariadne::Error)) ) ;

connect( m_tunnel, SIGNAL(clientDisconnected()) ,
          this, SLOT(sshClientDisconnected()) ) ;
```

3. Start tunnel

```
m_tunnel->acceptConnections(true);  
m_tunnel->start();
```

Limits & Future Uses

- Only **Remote** Tunnel supported
- Extend libariadne with Local Tunnel support
- Agent Management via Remote SSH Tunnel
- Platform Service Proxy
